Professional Summary

Computer Science graduate with hands-on experience in full-stack development, AI-powered computer vision, and scalable backend systems. Proficient in Python, Django REST Framework, Fast api, React, Node.js, and Firebase with a strong foundation in deep learning and real-time data processing. Designed and deployed intelligent transportation and driver-safety solutions integrating REST APIs, deep learning models, IoT hardware, and real-time analytics dashboards.

Technical Skills

Languages: Python, C++, JavaScript, SQL, HTML, CSS
Backend & Web: Django, Django REST Framework, Fast api, React.js, Node.js, Express.js, REST APIs
AI & Computer Vision: PyTorch, OpenCV, YOLOv8, Scikit-learn, EfficientNet-B0, BiLSTM, NumPy, Pandas
Databases & Tools: Firebase, MySQL, SQLite, Git, GitHub, Postman, VS Code

Experience

Microinformatics — **Aug 2026 – Oct 2026**
Intern — *Remote*

- Currently learning web development fundamentals alongside machine learning and deep learning concepts under mentorship.
- Gaining hands-on exposure to real-world development practices and AI/ML workflows as part of an ongoing remote internship.

Cousync — **Feb 2026 – May 2026**
Backend Django Intern — *Lahore, Pakistan*

- Developed RESTful APIs using Django REST Framework for scalable, production-ready application features.
- Integrated React frontend components with backend APIs and supported database query operations.
- Implemented serializers, request validation, token-based authentication workflows, and API testing.
- Collaborated using Git and GitHub and contributing to debugging and backend maintenance.

Projects

Smart Campus Transit System – Final Year Project — *MERN, Fast api, Firebase, GPS, RFID, ESP32*

- Designed and developed a full-stack intelligent transportation platform for smart campus management using the MERN stack.
- Developed REST APIs to integrate computer vision and machine learning models with the web portal.
- Integrated IoT technologies including GPS tracking for live bus location and RFID-based attendance for drivers and students.
- Implemented passenger overcrowding alerts, safety notifications via Firebase, and analytics dashboards for transportation monitoring.

Vehicle Body Safety System — *EfficientNet-B0, Flask API, OpenCV*

- Built a video analysis pipeline using mobile-recorded driving footage with vehicle detection, proximity features, and depth estimation.
- Trained an EfficientNet-B0 classifier served via Flask API, achieving approximately 94.8% test accuracy on the prepared dataset.

Near-Collision Prediction System — *PyTorch, EfficientNet-B0, BiLSTM, Flask API*

- Developed a video classification model using EfficientNet-B0 for feature extraction and BiLSTM for sequence learning to predict time-to-collision and generate early warning alerts, served via Flask API.
- Evaluated model performance using accuracy, precision, recall, F1-score, ROC-AUC, and average precision metrics.

Driver Drowsiness & Phone-Usage Detection — *EfficientNet-B0, OpenCV, Flask API*

- Built real-time driver monitoring modules for fatigue and distracted-driving detection from video streams, served via Flask API.
- Combined EfficientNet-B0 predictions with Eye Aspect Ratio and Mouth Aspect Ratio rules for real-time alert generation.

Pet Adoption & Care Management System — *MERN Stack, SQL*

- Developed a full-stack web application for pet adoption and care management using the MERN stack with structured SQL databases.
- Implemented role-based authentication, authorization, and REST APIs for user management and application workflows.

Education

University of Engineering and Technology (UET), Lahore **2022 – 2026**
Bachelor of Science in Computer Science *Lahore, Pakistan*

Punjab Group of Colleges **2020 – 2022**
Intermediate in Computer Science (ICS) *Lahore, Pakistan*

Sacred Heart Cathedral High School
Matriculation (Science) *Lahore, Pakistan*
